Community Energy Savings Day

Conserve power, save money, help the community.

High electricity demand is expected as temperatures continue to rise.

In response, a Community Energy Savings Day has been called.

You can help by using less electricity.

How can you help?

Turn off and unplug
Turn off lights and electronics that are not in use, and unplug things like cellphone chargers and coffee makers.

Use fans and turn up the thermostat
Raise your thermostat to 78 and use fans, as they use less energy than AC.

Use your blinds and windows
Keep windows and blinds closed during the day to avoid heat gain. Open windows and blinds overnight to take advantage of cooler temperatures outside.

Don't create extra heat
The oven, dishwasher and washing machine can produce excess heat and humidity. Use these things later in the day.
